

Taking the last steps up to IPTC's Video Metadata solution

IPTC Photo Metadata Conference

26 May 2016

Michael Steidl

Managing Director IPTC

The Starting Point

Video is an area of rich diversity:

- Many formats of a frame
- Many technologies for how video data and audio data are compressed
- Many formats defining how files containing video are designed/built
- Different schemas for metadata associated with a video
- Different ways to embed metadata into video files
- Different ways to express rights and restrictions

... resulted in user experience like that ...

See table at www.guildmaster.com

The Initiative aimed at ...

... applying metadata
- used by many
parties – should
become more easy.

... moving
technical details
of metadata in
the 2nd row.

... which makes now the

IPTC

Video Metadata Hub

means:

- A collection of widely used metadata properties, each one with
 - a name
 - a definition of the semantics
 - a basic data type
 - a cardinality

means:

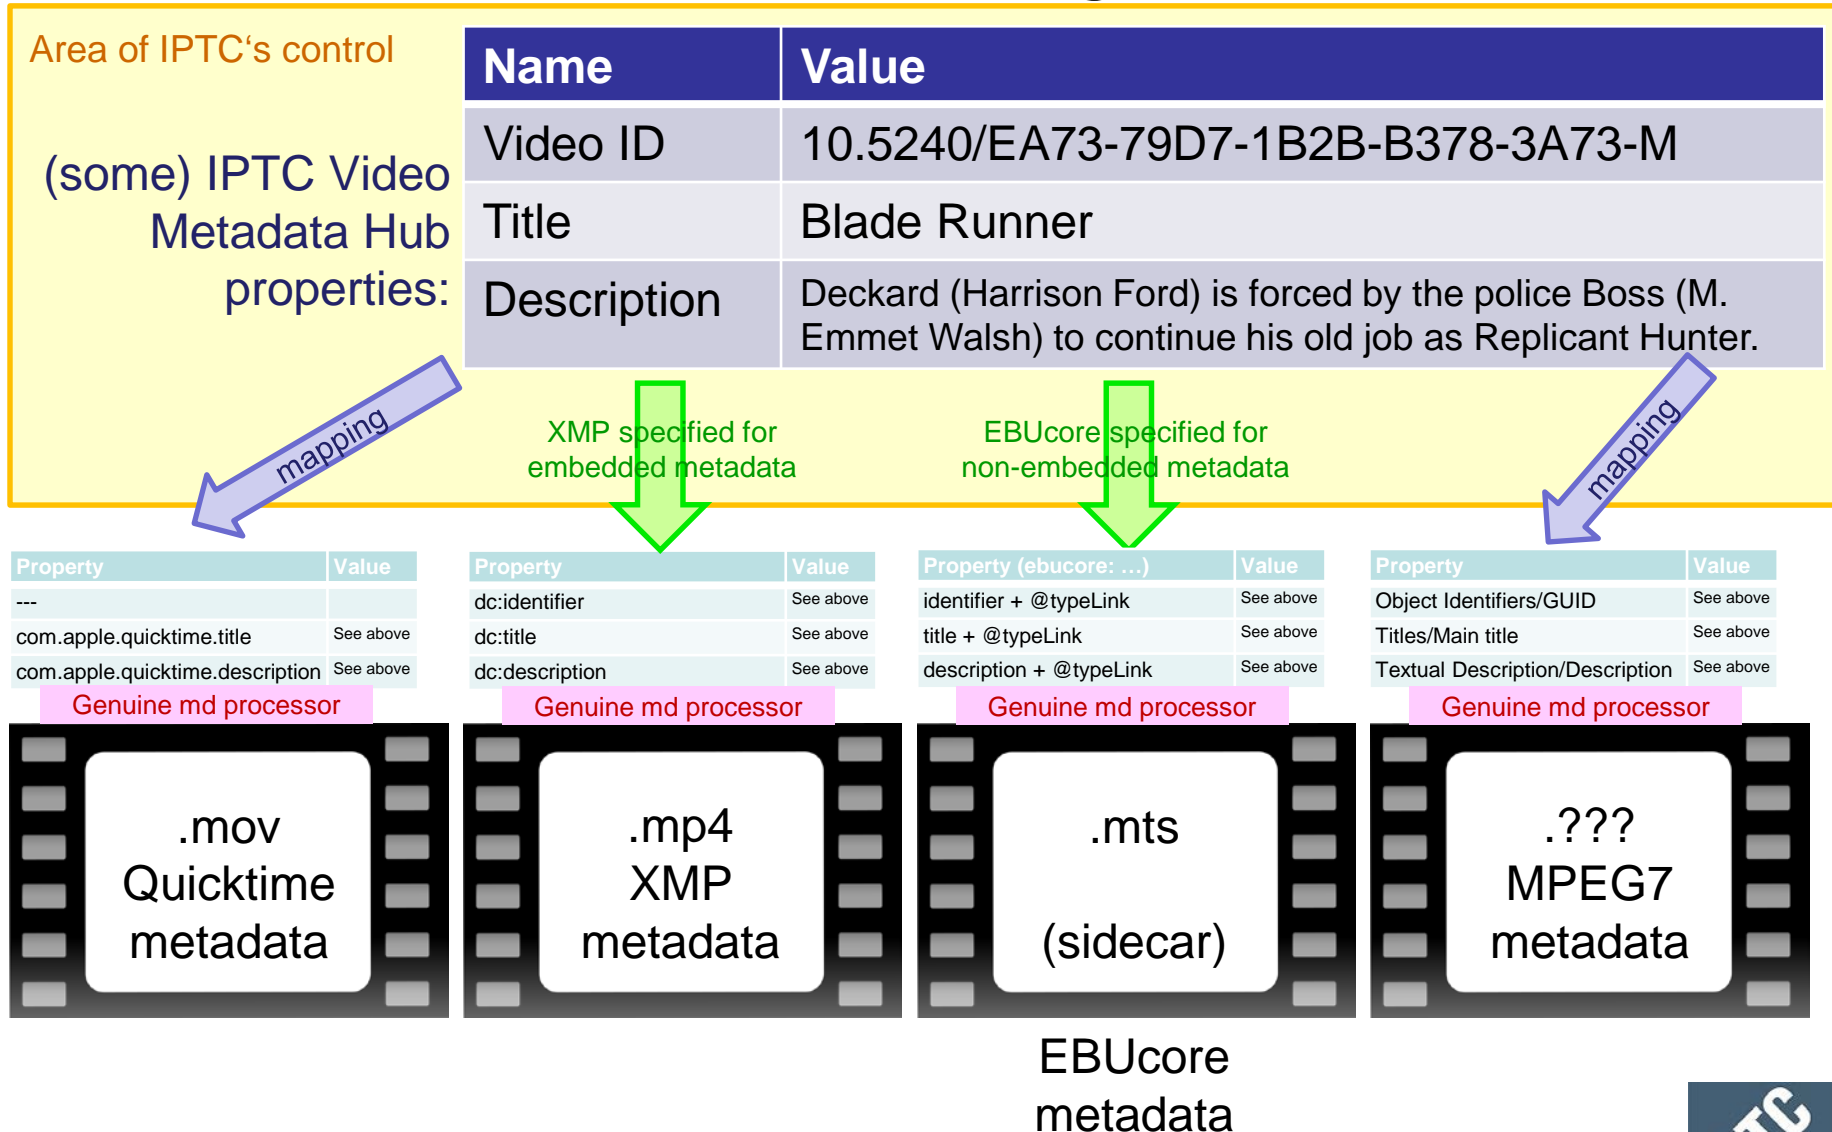

- A default technical implementation for
 - embedding metadata (using XMP)
 - saving metadata in a stand-alone document (using EBUcore)
 - metadata via API (IPTC JSON format)
 - ... if no other format/standard should be used.

means:

- A recommended mapping of the IPTC VMD-Hub properties to semantically equivalent properties of other (video) metadata schemas.

VMD-Hub's Basic Design – illustrated

Action as Semantic Hub

(some) IPTC Video
Metadata Hub
properties:

Name	Value
Director	Ridley Scott
Title	Blade Runner
Description	Deckard (Harrison Ford) is forced by the police Boss (M. Emmet Walsh) to continue his old job as Replicant Hunter.

Property	Value
com.apple.quicktime.director	Ridley Sch
com.apple.quicktime.title	Blade Run
com.apple.quicktime.description	Deckhard

Planned mappings

*) specified default technical implementation

Hub Benefits

- Guidelines for organising metadata of videos from different sources in a common way
- Support of workflows with videos of different standards
- Support of switching from an “old” to a “new” standard
- Support of searching across videos of different standards

Some details ...

VMD-Hub Members^{*)} – describing A/V

- Title
- Headline
- Description
- Keywords
- CV Terms About the Content
- Dopesheet
- Transcript
- Data Displayed on Screen
- Language Version
- Location Shot
- Location Shown
- Depicted Event
- Person Shown
- Person Heard
- Featured Organization
- Object Shown
- Product Shown
- Genre
- Shot Type

^{*)} VMD Hub Draft #4, June 2016

VMD-Hub Members – rights relevant

- Creator
- Contributor
- Supplier
- Licensor
- Rights Owner
- Copyright Notice
- Copyright Year
- Credit Line
- Licensing Terms
- Model Release Status
- Model Release Document
- Property Release Status
- Property Release Document
- Source

VMD-Hub Members - administrative

- Date Created + Modified + Circa Date + Style Period
- Date Released
- Ready for Release
- Rating (supports different sources)
- Video Identifier
- Video Version
- Video Rendition
- Registry Entry
- Feed Identifier
- Storyline Identifier
- External Metadata URL

VMD-Hub Members - technical

- Stream-ready
- Orientation
- Media Type
- File Format
- File Duration
- Editorial Duration Start
- Editorial Duration End
- Editorial Duration
- Frame Size
- Signal Format
- Signal Aspect Ratio
- Display Aspect Ratio
- Stream Count
- Video Coding
- Video Profile
- Video Frame Rate
- Video Bitrate Type
- Video Bitrate
- Audio Coding
- Audio channels
- Audio channel layout
- Audio Sample Rate
- Audio Bitrate Type
- Audio Bitrate
- File Bitrate

About Mapping

IPTC VMD-Hub property:

Under IPTC's
control

- name: **Date Created**
- definition: Date and optionally time when the video was created
- Basic data type: Date/opt. Time, single occurrence
- Mapping = pointing at different corresponding technical expressions as defined by a specific standard
 - EBUcore: date/created
 - XMP: photoshop:DateCreated
 - QuickTime: com.apple.quicktime.creationdate
 - MPEG-7: CreationInformation/Creation/Date
 - Schema.org: <http://schema.org/dateCreated>

Current Targets of Mappings

- EBU Core: metadata specification for broadcasting, global use
- XMP: ISO metadata syntax specification primarily used for embedding into binary files (photo, video, audio)
- Quicktime: metadata specification by Apple for its Quicktime (*.mov) format
- MPEG-7: ISO specification for multimedia metadata
- Schema.org: metadata specification to be used in web pages, support of the Semantic Web

Fragments and the Whole

Metadata of the video, including

Name	Value
Video ID	UUID:4567
Title	IPTC endorses new standard
Description	IPTC has endorsed its new set of video metadata.

Name	Value
Video ID	UUID:7890
Title	Sun shines in all videos
Description	Exciting phenomenon: it looks like the sun shines in all videos.

The Message:
VMD-Hub
supports metadata
for the video as a
whole and for
fragments of it.

Name	Value
Video ID	UUID:....
Title	News At Noon
Description	All relevant news at today's noontime.

Next Steps

- Draft #4: to be released in late June 2016
→ invitation to submit feedback
Watch <http://dev.iptc.org/Video-Metadata>
- Final draft Recommendation document in early October
- Voting at the IPTC Autumn Meeting (24-26 Oct 2016)
- Publishing and marketing
